

# On the free surface of a quasi-bidimensional turbulent flow

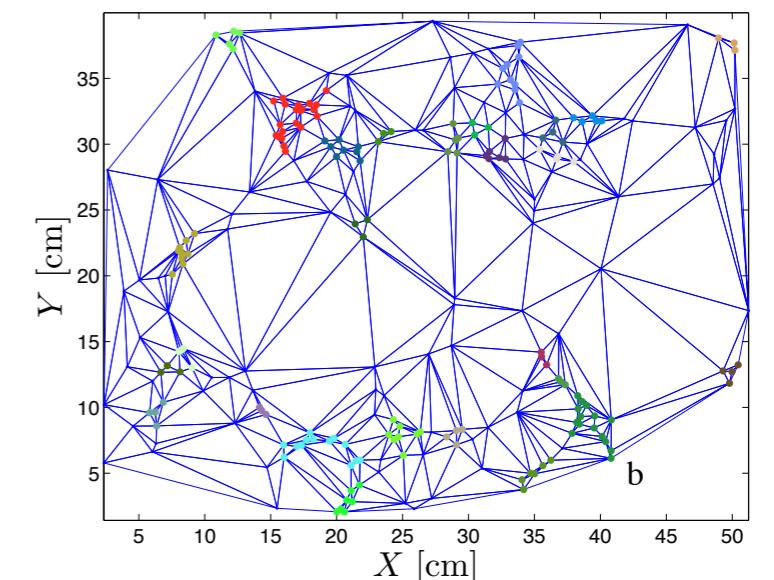

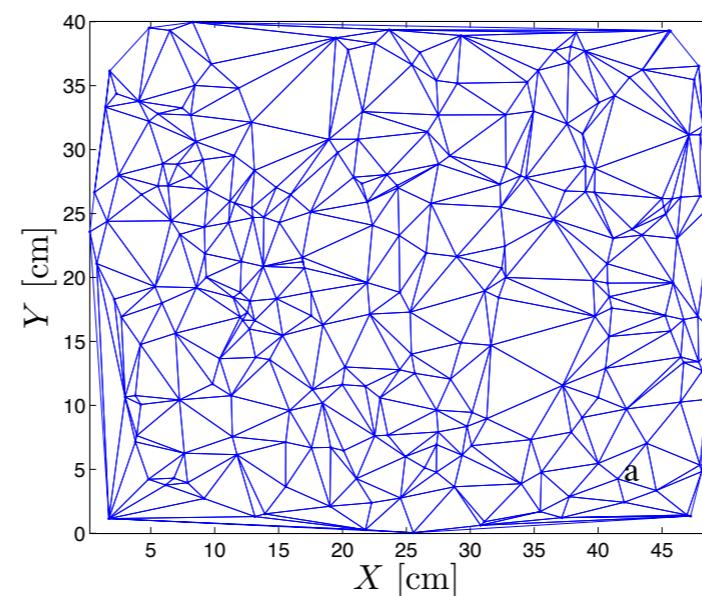

Pablo Gutiérrez & Sébastien Aumaître / SPEC /CEA-Saclay

## Experimental Approach:

- MHD forcing  $\vec{F}_L = \vec{J} \times \vec{B}$  using an electric current (between 0 and 600 A) and Permanent magnets.
- Shallow layer with free surface.

## I) Clustering of particles

# On the free surface of a quasi-bidimensional turbulent flow

Pablo Gutiérrez & Sébastien Aumaître / SPEC /CEA-Saclay

## 2) Surface level fluctuations
