

Effets du contraste de viscosité sur le mûrissement hydrodynamique

Hervé HENRY et Gyorgy TEGZE

Labo. PMC, CNRS, Ecole Polytechnique et Wigner Inst. Budapest

Simulations numériques d'un Cahn Hilliard avec écoulement.

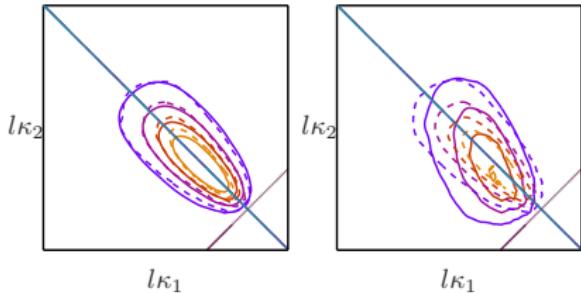

Effect of viscosity contrast on coarsening (volume fraction=0.5)

Motivated by recent work of D. Bouttes *et al* (X-Ray Tomography).

Effect of viscosity contrast ($VC = \nu_h/\nu_l$) on the self-similar growth i.e. on the patterns?

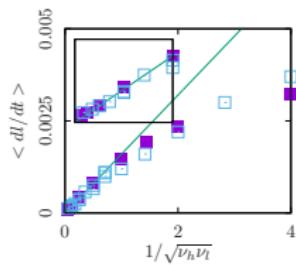

Effect of viscosity contrast on the rate of growth (**effective viscosity**)?

PDF of princ curv.

Noticable effect

growth velocity

$$\text{effective viscosity } \nu_{\text{eff}} = \sqrt{\nu_h \nu_l}$$
