

Reversing mean flows emerge from turbulently-generated internal waves

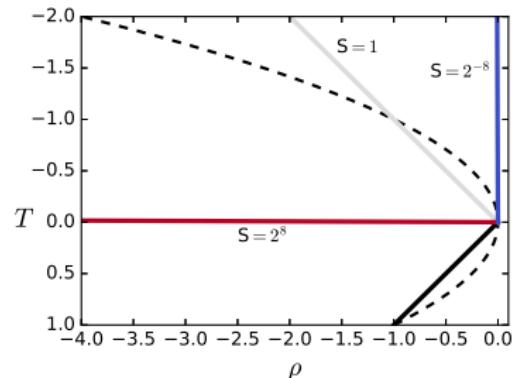

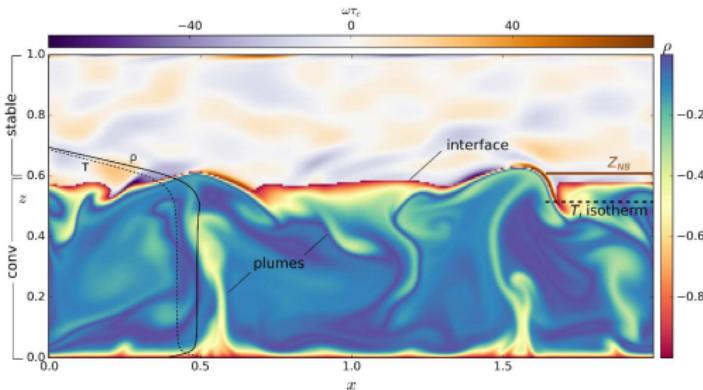

L.-A. Couston, D. Lecoanet, B. Favier & M. Le Bars

$$\partial_t \mathbf{u} + \mathbf{u} \cdot \nabla \mathbf{u} = -\nabla p - PrRa\rho e_z + Pr\nabla^2 \mathbf{u}$$

$$\partial_t T + \mathbf{u} \cdot \nabla T = \nabla^2 T$$

$$\nabla \cdot \mathbf{u} = 0$$

$$\rho(T) = -\alpha(T)T = \begin{cases} -T & \text{if } T \geq 0 \\ ST & \text{if } T \leq 0 \end{cases}$$

A Quasi-Biennial Oscillation in DNS?
