Aux sources du mouvement

Système nerveux central
(cerveau, moelle épinière...)

Système nerveux périphérique
(système somatique: proprioception,
méchanorecepteur...)

J. Gray, J. Exp. Biol. (1933)

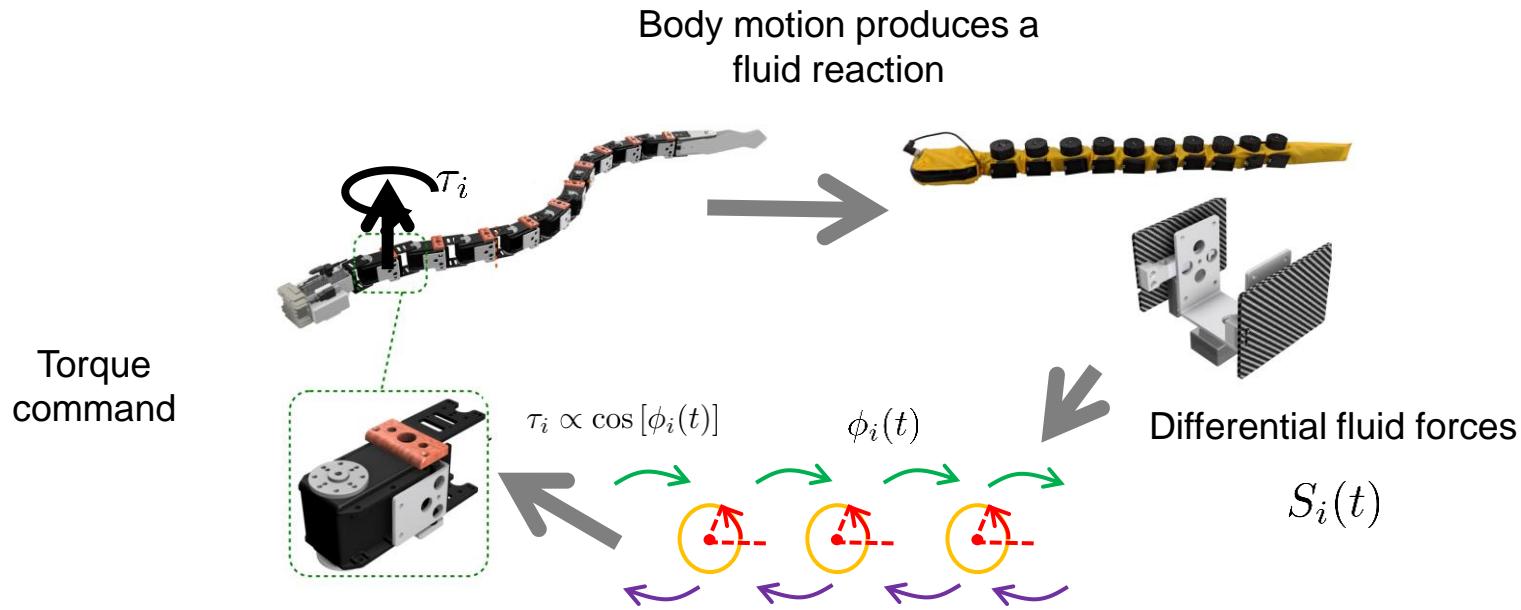

La robotique bio-inspirée comme méthode exploratoire pour identifier les mécanismes de coordination musculaire

On crée un antagonisme entre les systèmes **central** et **périphérique**?

GAIT TRANSITION AND BIFURCATION INDUCED BY HYDRODYNAMICAL SENSORY FEEDBACK IN AN ANGUILIFORM SWIMMING ROBOT

J. HERAULT¹, L. PAEZ², K. MELO², R. THANDIACKAL², V. LEBASTARD¹, F. BOYER¹ & A. IJSPEERT²

CPGs

$$\dot{\phi}_i = \omega_0 + \nu \sum_{k=\pm 1} \sin(\phi_{i+k} - \phi_i)$$

No phase lag

VERSUS

Sensory feedback

$$+ \sigma S_i(t) \cos(\phi_i)$$

Can it produce phase lag?

Oscillatory swimming
(standing wave)

Undulatory swimming
(propagating wave)
