

# Aftershocks as a time independant phenomenon

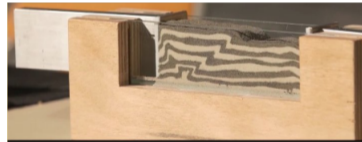

A. Mathey, J. Crassous, D. Marsan, J. Weiss and A. Amon

## San Andreas fault

typical size  $\sim 10\text{--}100$  km  
driving velocity:  $\sim$  cm/year

## shear band in granular material

typical size:  $\sim 10$  cm  
driving velocity:  $\sim$  cm/hour
